

GROWTH Research: *Enhance your Research*

Through the partnership between

GROWTH Research member organization

(ORG ABBR)

and Doctor Evidence, we are pleased to announce that all (ORG ABBR) members/faculty are now members of [GROWTH](#) (Guideline & Research Organizations Worldwide for Transparency & Harmonization). Doctor Evidence is a leader in technology solutions for high quality systematic reviews and clinical research analyses. GROWTH, a division of Doctor Evidence, is committed to improving the health and quality of life of patients by encouraging the development of evidence-based clinical recommendations and research through collaboration and resource-sharing. GROWTH Research permits access to the Doctor Evidence technologies and pre-digitized clinical studies' data and is now available to members of (ORG ABBR) without charge.

- **Clinical researchers will find many practical uses for this member benefit:**
- **High quality, methodologically rigorous systematic reviews to support evidence-based clinical recommendations for decision-support tools;**
- **Literature reviews to provide a basis for research projects;**
- **Meta-analyses to assess efficacy of one treatment over another;**
- **Network meta-analyses (Bayesian, Frequentist, or any option in the R-Statistical Package) of treatments to assess efficacy, even in the absence of head-to-head trials;**
- **Network meta-analyses to allocate patients in pragmatic clinical trials to treatment arms in which they are expected to have better outcomes based on their characteristics;**
- **Cohort analyses to explore treatment effects associated with specific patient characteristics;**
- **Data explorations permitting visualizations of a body of evidence to determine areas of strengths and weaknesses;**
- **Gap analyses in a topic area;**
- **Cost-benefit analyses and economic modeling;**
- **And so many more...just use your imagination!**

The database of pre-digitized clinical research is constantly being updated with new studies in all fields of medicine, currently containing over 20,000 studies.

When necessary for specific projects, additional services are available to (ORG ABBR) members at the low GROWTH-eligible pricing. Doctor Evidence staff will help researchers estimate these costs so that they can be included in grant applications and passed through to the funding organizations.

Contact Sandra Zelman Lewis, Chief Guidelines Officer at Doctor Evidence (slewis@doctorevidence.com) for login credentials and to receive training on the Doctor Evidence platform, or to learn more about GROWTH programs.
